On page 1879, the figure caption refers erroneously to Eq. (12) instead of Eq. (14): “dashed line in the first Born approxima-

Equation (13) on page 1878 should be

\[
\begin{align*}
&\frac{1}{2} + \frac{x}{\sin (n-m)\pi y/H} + \frac{y}{\sin (n+m)\pi y/H}
\end{align*}
\]

In Eq. (14) on page 1878, \( T_{an} \) should be

\[
T_{an} = \delta_{an} + \frac{(\rho/\tilde{\rho} - 1)}{2ik_sH} [k_a k_n C_{an} (k_n - k_a) + D_{an} (k_n - k_a)] - \frac{k^2 (B/\tilde{B} - 1)}{2ik_sH} C_{an} (k_n - k_a).
\]

In Eq. (15) on page 1878, \( D_{an} \) should be

\[
D_{an}(x) = 2k_a d_{an} \epsilon(x) + O(\epsilon^2), \quad d_{an} = 2nN \frac{\pi^2}{k_a H} \sin \frac{n\pi y_0}{H} \sin \frac{N\pi y_0}{H}.
\]

On page 1879, the figure caption refers erroneously to Eq. (12) instead of Eq. (14): “dashed line in the first Born approxima-

Equation (28) on page 1883 should be

\[
T_{perio}^{\text{non}} = \delta_{an} + \frac{i}{2} [-(\rho/\tilde{\rho} - 1)(S_{dn} + S_{an}) + k^2 (k_a k_n)(B/\tilde{B} - 1)S_{an}] \frac{1 - e^{i(k_n-k_a)L}}{1 - e^{i(k_n-k_a)H}} C_{dn}(k_n - k_a),
\]

\[
R_{perio}^{\text{non}} = i [-(\rho/\tilde{\rho} - 1)(S_{dn} - S_{an}) + k^2 (k_a k_n)(B/\tilde{B} - 1)S_{an}] \frac{1 - e^{i(k_n-k_a)L}}{1 - e^{i(k_n-k_a)H}} C_{dn}(k_n + k_a).
\]

In Eq. (30) on page 1883, \( R_{e_0}^{\text{perio}} \) should be

\[
R_{e_0}^{\text{perio}} = i k_{e_0} \frac{k_S}{2H} [(\rho/\tilde{\rho} - 1) + k/k_a (B/\tilde{B} - 1)] \cos \frac{n\pi}{2} S((k + k_a)R).
\]

On page 1883, the figure caption of Fig. 8 refers erroneously to the equations. It should read:

FIG. 8. Scattering by a periodic set of scatterers [\( x_{0p}/H = (2, 2.5, 3), y_{0m}/H = (0.25, 0.75) \)] for the Mode 1 incident

(k = 5.56, \( R = 0.05, \epsilon/\tilde{\epsilon} = 0.9, \rho = \tilde{\rho} \)). (a) Scattered field \( p_M^n \), on the bottom \( p_0^n \) using Eq. (28). The error is \( E_R = 6\% \). (b) \( p_n(x) \) for \( n = 0, \ldots, 6 \), plain lines correspond to the results obtained with the melina code, dashed dotted line to the solution using Eq. (28). Only odd modes are expected to be non vanishing from Eq. (25).

On page 1884, the figure caption of Fig. 10 refers to Eq. (4.7) instead of Eq. (30).
